“

The newly added Laplink Remote Desktop function is the product's most powerful remote control yet. Laplink is a simple-to-use and affordable solution for connecting remotely to a PC at home or at the office.

Dennis McCafferty
Web Host Industry Review
August 2005 issue

“Laplink Gold makes things easy for me, for my staff, and for the remote users I support. It's easy to use as a support tool, it's easy to train new staff to use, and it's easy to install on the host computers. It's also un-intimidating for the people using the host PCs, because they don't have to grant permissions or do anything to enable the connection. They can just watch as I fix the problem and see exactly what I'm doing.”

Cathy Smulders, Helpdesk Coordinator, Imperial Parking Corporation

Combining fast remote control, automatic connections through firewalls, and a full complement of remote support tools, Laplink Gold 2008 is the product of choice for IT professionals who need to deliver secure, reliable support to distant PCs and PC users.

This full-featured program works across all Windows operating systems, and allows administrators to access and synchronize files, run applications, support co-workers, and maintain and even reboot computers remotely.

FILE TRANSFER & SYNCHRONIZATION

Laplink Gold 2008 brings powerful file transfer and synchronization capabilities to remotely connected PCs.

Laplink's patented SpeedSync® technology transmits only the updated portion of previously downloaded files, enabling the fastest file transfers possible.

SmartXchange® instantly synchronizes multiple folders and schedules automatic, unattended file transfers—without complex scripting.

REMOTE CONTROL

In partnership with Microsoft, Laplink is the only independent software company to extend the functionality of Microsoft Remote Desktop, even on computers that have not activated this feature. Laplink Gold's integrated Remote Desktop combines the fastest, most responsive remote control experience with simple, secure, automatic firewall traversal.

Note: Remote Desktop integration is available only for: Windows XP Professional, Windows XP Tablet PC, Windows Vista (Business, Enterprise, Tablet PC, and Ultimate editions) or Windows Server 2003 with terminal services installed and running.

Laplink Remote Control is available for connecting to any Windows operating system running any version of Laplink Gold.

REMOTE SUPPORT

Laplink Gold includes integrated text and voice chat for convenient communication with remote PC users.

ENHANCED UI

Laplink Gold conforms to the familiar look and feel of Windows operating systems, which encourages faster user adoption. The shortcut bar keeps remote sessions organized by keeping common tasks accessible and hiding tasks that can't be performed.

CONNECTION OPTIONS

Connect to remote PCs using a Laplink serial cable, Laplink USB cable, a wired or wireless network, or over the Internet.

Note: Laplink serial cable works with Windows Server 2003/XP. Laplink USB cable works with Windows Server 2003/XP/Vista.

Laplink Internet lets you reliably and securely connect to other Laplink Gold computers through existing firewalls and proxy servers. The first 12 months of Laplink Internet is included free.

SECURITY

Choose between Microsoft or Laplink authentication with folder-level security.

All data is protected during transmission with multi-level encryption (including Microsoft's CryptoAPI support).

Laplink Gold also lets you set case-sensitive passwords and lockout protection.

INDIVIDUAL USE

Laplink Gold 2008 is the perfect solution for PC users who need to be able to connect to a remote computer. It's ideal for mobile professionals, teleworkers, or people who need to keep files synchronized between two or more computers.

Because it works automatically through firewalls and proxy servers, it's easy to set up and use. With a wide range of connection options, you can always remain connected and productive.

CORPORATE USE

Support Co-Workers Remotely

Trim your inter-office, cross-town, or cross-country travel by supporting users and managing remote servers without leaving your desk. Laplink Gold can be deployed enterprise-wide from a single location. Enhance your troubleshooting abilities by using your Laplink connection for text or voice chat. Capture and retrieve snapshots and obtain system information on remote computers.

Get More Flexibility

Choose from cable, network, or Internet connections to reach any remote PC running Laplink Gold on any version of Windows. Laplink Gold 2008 is also fully backwards-compatible, so you can support users running any earlier version of Laplink Gold.

Connect Through Firewalls

Connect through firewalls automatically to conveniently operate, maintain, reconfigure, and even reboot remote machines.

KEY FEATURES:

- Works across all Windows operating systems¹
- Transfer files faster with SpeedSync® technology
- Schedule unattended folder synchronization with SmartXchange®
- Support remote users with integrated voice or text chat
- Connect automatically through firewalls and proxy servers
- Choose from serial, USB, network, or Internet connections
- Enhanced, Windows-based UI
- Multi-level data encryption
- Case-sensitive passwords and lockout protection

System Requirements:

- Microsoft Windows XP/Server 2003/Vista²
- 133 Mhz or higher Pentium-compatible CPU
- At least 64 megabytes (MB) of RAM (more memory generally improves responsiveness)
- 30 MB or available hard disk space (for an installation)
- VGA or higher resolution monitor
- Keyboard and mouse required for server installations

¹ PCs running Windows 98 SE, Me or Server 2000 require Laplink Gold 12 which is included with your purchase of Laplink Gold 2008 or can be purchased separately.

PCs running Windows 98 First Edition or Windows 95 require Laplink Gold 11.5 which must be purchased separately.

² Excludes 64 bit Operating Systems
